DELETE

/releases/{release_id}/rating/{username}

Deletes the release's rating for a given user. [Authentication](#) as the user is required.

Parameters	
release_id	number (required) Example: 249504 The Release ID
username	string (required) Example: memory The username of the rating you are trying to request.

Community Release Rating

The Community Release Rating endpoint retrieves the average rating and the total number of user ratings for a given release.

GET /releases/{release_id}/rating	
Retrieves the community release rating average and count.	
Parameters	
release_id	number (required) Example: 249504 The Release ID
Response	200
Toggle	

Release Stats

The Release Stats endpoint retrieves the total number of “haves” (in the community’s collections) and “wants” (in the community wantlists) for a given release.

GET /releases/{release_id}/stats	
Retrieves the release's “have” and “want” counts.	
Parameters	
release_id	number (required) Example: 249504 The Release ID
Response	200
Toggle	

Master Release

The Master resource represents a set of similar Releases. Masters (also known as “master releases”) have a “main release” which is often the chronologically earliest.

GET	/masters/{master_id}
Get a master release	
Parameters	
master_id	number (required) Example: 1000 The Master ID
